Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(i) & 37 CFR 1.84(p) because numbers & letters are not uniformly thick and well defined, clean, durable, and black (poor line quality). Also, some characters are too small.

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Woo (US 5,264,745).

Regarding claim 1, Woo discloses, in Figs. 2 and 4, a converter from ECL to CMOS (T1 or T2) having an input stage (left circuit of Fig. 4 including N19, N3), level shifter stage (middle

circuit of Fig. 4 including N12, N4A), and an output stage (right circuit of Fig. 4 including P29, N30), wherein the level shifter stage includes an NFET differential stage (N12, N4A).

Regarding claim 2, Woo discloses, in Figs. 2 and 4, that the input stage and/or the level shifter stage have a switching-threshold control system (circuit including N5, N6, N7, P9, P10).

Regarding claim 3, Woo discloses, in Figs. 2 and 4, that the converter comprises means for generating a reference voltage (circuit including P9, N5, N6) for current-source transistors (N4, N8) to control the switching threshold.

Regarding claim 5, Woo discloses, in Figs. 2 and 4, a network element (circuit in Fig. 2) transmitting signals (col. 1, lines 12+) which comprises a converter from ECL to CMOS (T1 or T2) having an input stage (left circuit of Fig. 4 including N19, N3), level shifter stage (middle circuit of Fig. 4 including N12, N4A), and an output stage (right circuit of Fig. 4 including P29, N30), wherein the level shifter stage includes an NFET differential stage (N12, N4A).

Allowable Subject Matter

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
